Modular Mall Scene - Part 1

Product URL <https://poserworld.com/modular-mall-scene-part-1>

Short Description: The 3D modular mall for Poser and DAZ Studio contains a main section and a staircase section and includes a bench, fountain, trash can and two planters. The sections can be used side by side or across from each other. The windows/doorway panels/signs have their own texture so that you can easily create new store fronts and make a larger mall. The doorway panels can be removed and the glass setup as glass so that you can use the interior of the stores as well. This is part one of the modular mall set. This set took 65 hours to model and texture. If you want to add plants or trees to the two planters we do have a large section on the 3D plants download section. Part two (food court section) and Part 3 (movie theater section) is available.
